SMOKE-PEN Applications.

- Energy Conserving Spec.
- Duct Testing
- Draft Testing
- Leak detection
- Safety Specialists
- Negative Pressure Rooms
- Positive Pressure Rooms
- Fume Hoods
- Exhaust Fans
- Stage and Screen Effects
- Photographic Effects
- Air Balancing Professionals
- Air Filtration Testing
- Dust Removal Systems
- Fire and Smoke Alarm Tests
- Poultry and Livestock
- K-9 Training
- Heat Exchangers
- Tanks and Piping
- Kitchen Hoods
- Electronic Air Filters
- Asbestos Abatement
- Radon Abatement
- Risk Management Spec.
- Waste Treatment Systems

Leak Detection:

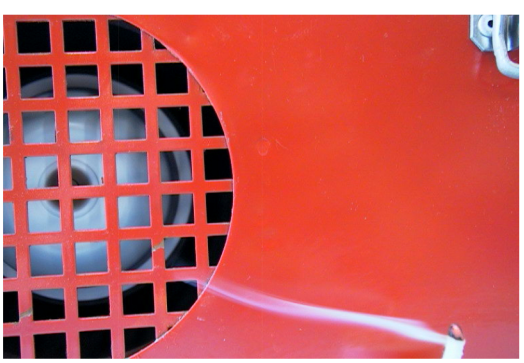
- Cargo Trailers
- Cargo Containers
- Recreational Vehicles

The Smoke Pen works like a mechanical pencil. A patented smoke-emitting wick is inserted into the convenient to use pen, adjust the wick to provide 10 mm or 3/8” of exposed wick, light the wick with a match or lighter.

The smoke pen will provide a continuous trail of smoke. The Smoke Pen can then be easily extinguished by simply replacing the protective cover. The Smoke Pen can now be stored and re-used for next test.

This non-toxic, cool burning emitter is ideal for air balancing, verifying ventilation, testing smoke alarms , tests for negative or positive pressure and the list goes on.

For tests in areas where there is a fire restriction please use our FP-SMOKE series.



Energy saving in households can be a gamble if you do not know where you should begin your changes.

Some of the largest energy consumers can be drafts because of poorly performed insulation from external cold / heat, building faults in house structure, faults in electric installations and much more.

All this is easier to find with a trail of smoke from our Smoke-Pen.
